

Day 5 –

- Don't rush for PR
- Run code locally perfectly then only push code
- Be a serious contributor
- When u r pushing code, you are liable to answer that
- He has drafted PR not rushed to PR
- Github is your brand value, protect it by pushing good code

- Be patient
- It will take month's to merge your PR
- Don't keep expectations
- Sometimes they close PR, not merged
- Reply them respectfully
- We can see in vscode, who committed that line, & get redirected to their email
- So if there is something wrong in line, you will be judged then

- Don't understand issue
- Reason is – YOUR TechStack is weak
- Its all about experience and knowledge in that techstack
- Twitter clone = 80% techstack course (aim is not to make twitter clone but to learn this tech stack) and then make clones of FB, linkedin, Insta using same tech stack

- Basic React & Node knowledge is prerequisite for this open source course & twitter course
- Keep investing in courses
- **Tech Stack**
- ReactJS
- NodeJS
- PostgreSQL Database
- GraphQL
- Redis
- JSON WEB Tokens
- TypeScript
- Next.js
- React Query
- Javascript

- Stuck in tutorials
- Build project / big project
- No YT, Only Google kro
- Stack for Backend = always go for optimizations & speed

How to understand big codebases ?

- Search and read only things which are useful for your contribution or to solve your issue
- Don't try to understand all codebase

- Join discord
- Share issue / PR link on discord = PLEASE SHOWOFF

- You need to learn JS, React, TypeScript , NextJS
- System design = alexU
- You should have good vision and initial setup for project then people will open contribute to your project
- ACL = learn it & use it in Project (access control list)

- LOW EXPECTATIONS, HIGH CONTRIBUTIONS

- React > query caching > NextJS

- Start writing blogs today on ..
- Good RESUME, Good PROJECTS, Good Tech CONTRUBUTIONS
- Web rtmp for live streaming
